OBJECTIVE

Motivated MCA (Generative AI) student with strong skills in Python, AI/ML, NLP, data structures, and databases, seeking an internship or entry-level role to apply analytical thinking and AI-driven development to real-world problems while contributing to scalable, data-driven systems in a collaborative environment.

EDUCATION

- **Master of Computer Applications (MCA) – Generative AI** **2025-2027**

  SRM Institute of Science and Technology, Chennai
  (Currently Pursuing)

- **BACHELOR OF COMPUTER APPLICATION** **2022-2025**

  Veer Narmad South Gujarat University

- **XII (GSEB)** **2021-2022**

  Shree Saraswati Vidhyalaya

- **X (GSEB)** **2019-2020**

  The Radiant International School

TECHNICAL SKILLS

- **Programming Language:** Java, C , Python
- **Web Technologies:** HTML, CSS, PHP (Laravel)
- **Version Control:** Git, GitHub
- **Database Management System:** SQL, MySQL
- **AI/ML:** Machine Learning, Natural Language Processing (NLP), Generative AI
- **Frameworks & Tools:** Flask, Laravel, REST APIs
- **Additional Skills:** Data Structures, Web Scraping, API Integration, Automation

SKILLS

- **Problem-Solving**
- **Analytical Thinking**
- **Teamwork & Collaboration**
- **Communication Skills**
- **Time Management**
- **Adaptability & Continuous Learning**
- **Attention to Detail**

Projects

AI-Based Learning Management System - AILMS

Technologies: PHP, Python, Flask, REST APIs, Mistral AI, MySQL

- Developed an AI-powered LMS with real-time academic chat using Generative AI for learning-focused responses.
- Integrated Mistral AI chat/completions API with system constraints to ensure educational relevance.
- Built scalable Flask backend with REST APIs for chat handling, data storage, and error management.

Air Quality Monitoring Using Drone Technology - AirQualityMonitoring

Technologies: Arduino, NodeMCU (ESP8266), MQ135, DHT11, C++, ThingSpeak / Blynk

- Designed a drone-mounted IoT system to monitor air quality, temperature, and humidity in real time.
- Integrated sensors with ESP8266 and transmitted data wirelessly to cloud dashboards for analysis.
- Enabled wide-area and multi-altitude environmental monitoring for smart city and research use cases.

Spotify Clone – Frontend Development - SpotifyClone

Technologies: HTML5, CSS3, JavaScript, Bootstrap

- Built a responsive Spotify UI clone with playlist layouts and frontend music player controls.
- Implemented mobile-friendly designs using Flexbox, Grid, media queries, and Bootstrap.
- Added smooth animations and interactive elements with clean, reusable frontend code.

Certifications

- Google AI–ML Virtual Internship – Artificial Intelligence & Machine Learning | AICTE
- Data Structures & Algorithms (DSA) in Java – 1 Year Program

Work Experience & Achievements

- Developed an **AI-based Learning Management System** integrating Generative AI (Mistral AI) using Python and Flask to deliver real-time, learning-focused responses.
- Completed the **Google AI–ML Virtual Internship (AICTE)** with hands-on exposure to machine learning concepts, data handling, and model evaluation.
- Built **AI-driven and full-stack projects** using Python, Flask, REST APIs, NLP, and web technologies to solve real-world problems.
- Applied **Data Structures & Algorithms in Java** to strengthen problem-solving and analytical skills.
